## PAD ARMS

N O S E P A D S

In this catalogue you will find a complete range of nose pads, that you can easily select, depending on your different requirements

- Method of assembly:  
**SCREW**  
**CLICK**  
**PLUG IN**  
**BUTTON**

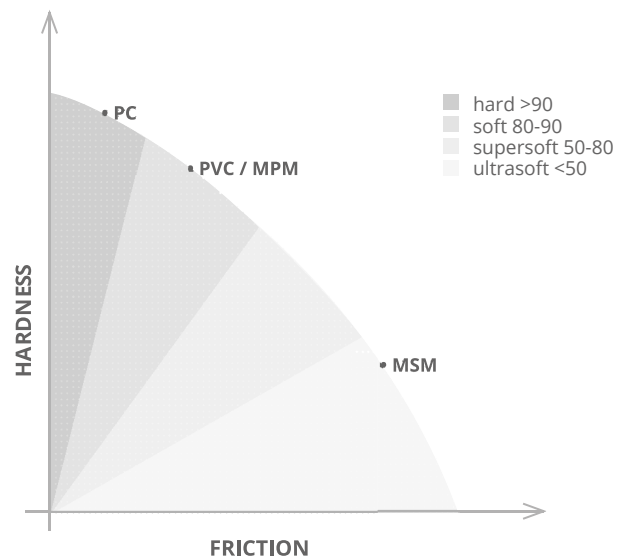

- Different materials:  
**PC**  
**PVC**  
**MPM** Medical PVC Material  
**MSM** Medical Silicone Material

- Wide choice of **different shapes**,  
in **different dimensions and thickness**

- Different Inserts:  
**Plastic**  
**Zamak**

- A variety of personalizations available

## GRAPHIC COMPARISON OF HARDNESS

Besides offering our line of products from the standard catalogue, we are always open to customization to meet your specific needs

## MATERIAL FEATURES AND BENEFITS

### PC

- Perfect clear appearance
- Highly transparent
- Clean and easy to clean under water
- Highly smooth surface
- Long-lasting lifetime
- Skin friendly, hypoallergenic, biocompatible

### PVC

- Highly clear appearance
- Clean and easy to clean under water
- Highly smooth surface
- Soft for better comfort
- UV resistant treated
- Long-lasting lifetime
- Wide choice of shapes and thickness
- Skin friendly, hypoallergenic, biocompatible

### MPM - MEDICAL PVC MATERIAL

- In addition to the above PVC features and benefits:
- First quality PVC compounds for medical applications according with United States Pharmacopeia standard
  - A variety of personalizations available

### MSM - MEDICAL SILICONE MATERIAL

- Pure crystal clear silicone appearance
- Increased comfort thanks to:
  - Highly smooth and soft material
  - Flexible edges
  - Anti-sliding effect
- Skin friendly, hypoallergenic, biocompatible
- Longer life time due to our exclusive PCS (Perfect Clear System)
- Wide choices of shapes, thickness and inserts
- A variety of personalizations available

**The NOSE PADS supplied from Visottica Comotec are offering you comfort, reliability and international standards of safety. In particular the nose pads are in compliance with:**

#### 1. REACH

It's a regulation of the European Union, adopted to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry.

#### 2. CPSIA

The Consumer Product Safety Improvement Act (CPSIA) of 2008 is a United States law signed on August 14, 2008. The legislation defines test requirements and new levels of acceptance for many common substances, such as Lead and Phthalates.

#### 3. PROP 65

"The Safe Drinking Water and Toxic Enforcement Act of 1986", better known as "Proposition 65" or "PROP.65", is a California State law that requires businesses to notify consumers in California when products contain substances that have been determined to cause cancer, birth defects or other reproductive harm.

#### 4. ISO 12870

ISO 12870:2016 specifies fundamental requirements for unglazed spectacle frames designed for use with all prescription lenses. It is applicable to frames when sold by the manufacturer or a supplier to the retailer.

- Inside the ISO 12870 the paragraph 4.4.2 explain the «General physiological compatibility». To measure the BIOCOMPATIBILITY of its products, Visottica S.p.A. has applied this test: ISO 10993 - "Biological Evaluation of Medical Devices". It is the international reference standard for the biological evaluation of medical devices and consists of three tests to be passed in order to confirm the biocompatibility of the finished product.

To be defined as MEDICAL GRADE MATERIAL, a substance needs to be compliant with the previous regulation AND with:

- **USP CLASS VI:** is a United States Pharmacopeia standard which consists of a series of screening tests to characterize the basic biocompatibility of the plastic under investigation. The three tests of the USP Class VI allow to analyse the biocompatibility of the plastic material:

- **Acute systemic toxicity:** the purpose of this test is to determine the irritant effect of toxic leachables present in extracts of test materials
- **Intracutaneous injection/reactivity:** the purpose of this test is to evaluate the potentials of materials to cause irritation on the exposed part of the body.
- **Implantation:** the purpose of this test is to evaluate the reaction of living tissue to the plastic.

## BISPHENOL A AND INTERNATIONAL REGULATIONS

Bisphenol A (CAS n° 80-05-7) is an organic synthetic compound which is mainly employed to make certain plastics and epoxy resins. Among these, BpA is used as a monomeric building block for the manufacture of Polycarbonate resin. Unavoidable technically trace levels (typically less than 100 ppm, parts per million) may remain in the polymer matrix of all Polycarbonate resins (so-called free or residual BpA) and, therefore, trace levels of BpA can be present also in all Polycarbonate articles.

Following several external laboratory tests on PC insert the results have remarked that, under normal conditions of use, Polycarbonate components used in the nose pads perfectly comply with BpA content limits fixed by European REACH Regulation and California Prop. 65.

All declaration of compliance are downloadable from our website: **[www.visotticacomotec.com](http://www.visotticacomotec.com)**

## PAD ARM CATALOGUE

### general information

You can find in this catalog a complete range of padarms for metal and plastic frames, in screw (box and minibox), click, plug'in and button attachment systems.

In the first part you can find all our standard, Level 1, products classified by different materials.

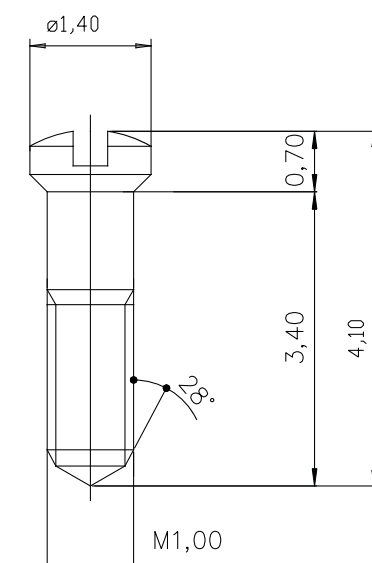

Level 2 is an invitation for "Do it yourself" ! Do your own combination of different standard elements taken out of Level one (a standard attachment combined with a standard stem).

In last part, Level 3, you can find some examples of customised products made under requests.

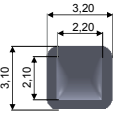

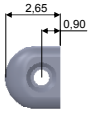

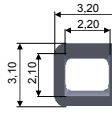

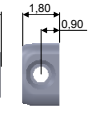

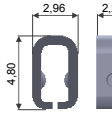

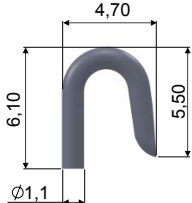

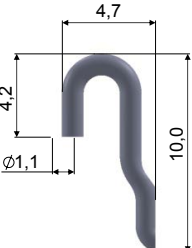

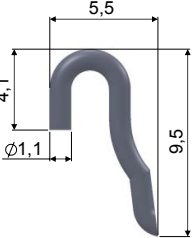

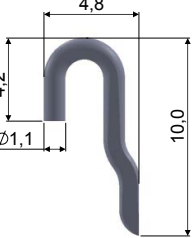

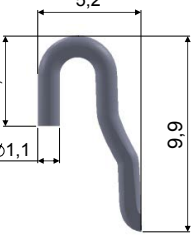

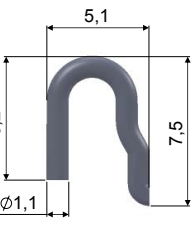

## VISOTTICA SCREW
